

GULFAM HASSAN

Senior Software Engineer | Backend, Distributed Systems & Cloud Infrastructure

+91 9268110888 | gulfam.h@gmail.com | [linkedin.com/in/gulfam-hassan](https://www.linkedin.com/in/gulfam-hassan)

SUMMARY

Senior Backend Engineer with **9+ years** of experience architecting and scaling **high-throughput, low-latency distributed systems** serving millions of users. Expertise in **Java, Spring Boot, Kafka, microservices, and cloud-native development on AWS**. Proven track record of building **event-driven systems processing 100M+ records/day**, reducing **API latency by 45%**, mentoring engineers, and owning production reliability through **on-call, observability, and incident response**. Strong foundation in **system design (HLD/LLD)**, distributed data systems, and **SLO-driven engineering**.

TECHNICAL SKILLS

Languages: Java (8-21), Python, TypeScript

Backend & APIs: Spring Boot, Spring Cloud, Spring Batch, Hibernate, JPA, REST, WebSocket, gRPC, Microservices, Multithreading, Concurrency

System Design: HLD, LLD, Scalability, CAP Theorem, Sharding, Partitioning, Replication, Load Balancing, Rate Limiting, Circuit Breakers, Design Patterns

Distributed Systems: Apache Kafka, Event-Driven Architecture, CQRS, Saga Pattern, Idempotency, Fault Tolerance, Async Messaging, Distributed Caching

Databases & Caching: MySQL, PostgreSQL, Oracle, Redis, Elasticsearch

Cloud & DevOps: AWS (EC2, ECS, EKS, Lambda, RDS, S3, SQS, SNS, CloudWatch, IAM), Docker, Kubernetes, Jenkins, CI/CD, Git, Terraform

Observability & SRE: ELK Stack, Prometheus, Grafana, Splunk, SLI/SLO/SLA, On-call, Incident Response, Distributed Tracing (Zipkin), Domain-Driven Design

Testing & Security: JUnit, Mockito, TestNG, SonarQube, Snyk, TDD, Integration Testing

Practices: Agile, Scrum, Code Reviews, Design Docs, Mentoring, Cross-functional Collaboration

PROFESSIONAL EXPERIENCE

Coforge | Senior Technical Lead | May 2024 - Present

- Led the **HLD and LLD** for a multi-tenant backend platform serving millions of users, designing it to scale horizontally across AWS regions and hold **99.99% availability** under production load.
- Built **Spring Batch** pipelines that process **100M+ records a day** using dynamic partitioning and exponential-backoff retries for fault tolerance. Cut batch runtime by **40%** and stopped the recurring SLA misses.
- Brought **p99 API latency down by 45%** by adding **Redis caching**, moving hot paths to **CompletableFuture** for async processing, and routing reads to **DB replicas**.
- Containerized and deployed microservices using **Docker and Kubernetes (EKS)** and rebuilt our **Jenkins CI/CD pipelines** so teams could release daily instead of weekly. Deployment success rate went up **25%**.
- Set up monitoring and alerting with **ELK, Prometheus, and Grafana** - cut **incident detection time by 40%**. Right-sizing instances and tuning autoscaling on top of that took **15–25% off our AWS bill**.
- Added **Snyk** to our CI/CD for code analysis and dependency scanning and pushed unit test coverage **from 60% to 85%+** with **JUnit, Mockito, and SonarQube**. Cut high-severity vulnerabilities by **70%** and dropped post-release production defects from roughly **8–10 per release to 2–3**.

Altimetrik | Senior Product & Platform Engineer | May 2021 - April 2024

- Built **event-driven services on Apache Kafka** handling **3,000+ TPS** with exactly-once semantics, which brought end-to-end latency down by **30%**.
- Designed the backend services and orchestration layer for our high-throughput data pipelines, adding **consumer-group scaling, backpressure, and idempotent consumers** so the system held up cleanly under peak load.
- Served as part of the **24/7 Black Friday war room** rotation debugging backend issues live, doing **root-cause analysis** on service failures, working with support whenever metrics spiked, and walking senior leadership through **RCAs** with follow-up actions.
- Wrote a small **automation script** that screenshots live dashboards and pushed them to leadership and the team on a schedule, so nobody had to keep refreshing tabs during peak hours.
- Worked with product and SRE to set **SLIs, SLOs, and error budgets** for new services-caught regressions earlier and brought customer-impacting incidents down by **35%**.
- Pushed test coverage from **60% to 90%+** with **JUnit, Mockito, and integration tests**, and wrote design docs for our core services that other teams ended up copying as a template.

IBM | Senior Software Engineer | May 2020 - May 2021

- Developed **microservices for critical financial systems** with strict SLA, regulatory compliance, and high-availability requirements.
- Improved transaction-processing by **25%** through efficient **query design, index optimization, and connection-pool sizing** verified with JMeter load tests before rollout.
- Built internal operational tooling and Angular-based UI modules, reducing manual operational effort by **20%**

Quinnox & NGV Tech | Software Engineer | Nov 2016 - April 2020

- Built scalable **REST APIs and backend systems** in Java and Spring Boot for enterprise clients, owning features from design through production deployment.
- Improved API performance with caching and query optimization, and applied **design patterns** (Strategy, Factory, Observer) to keep the codebase clean as the system grows.
- Increased automated test coverage to **80%**, improving code quality and reducing post-release defects.

EDUCATION

B.Tech, Computer Science Engineering (Guru Gobind Singh Indraprastha University, Delhi)

CERTIFICATIONS & AWARDS

- **Oracle Certified Professional, Java SE 8 Programmer**
- **Performance Excellence Awards** Altimetrik (2023) and IBM (2021) for platform and reliability impact.
